

ABSTRACT OF THE DISCLOSURE

A display apparatus is provided with a plurality of display device, at least one of which is a semitransparent display; and a fixing device for fixing the plurality of display devices to be placed along a front-rear direction on a viewer's line of sight each other, wherein a relationship
5 between the spacing $L(\text{mm})$ between image planes of adjacent of the plurality of display devices and the length $S(\text{mm})$ of diagonal lines of the two display devices satisfies a predetermined condition.
